USE

GLATIRAMER ACETATE INJECTION is a prescription medicine used for the treatment of people with relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults.

IMPORTANT SAFETY INFORMATION

Do not take GLATIRAMER ACETATE INJECTION if you are allergic to glatiramer acetate or mannitol.

Some patients report a short-term reaction right after injecting glatiramer acetate. This reaction can involve flushing (feeling of warmth and/or redness), chest tightness or pain with heart palpitations, anxiety, and trouble breathing.

Please see additional Important Safety Information on the back cover. Click here for Full Prescribing Information for GLATIRAMER ACETATE INJECTION 20 mg/mL or GLATIRAMER ACETATE INJECTION 40 mg/mL. Click here for the Instructions for Use provided with your WhisperJECT® Autoinjector device.
Features of the WhisperJECT®

The WhisperJECT® Autoinjector is intended for use with FDA-approved drug products with non-viscous (aqueous) liquid formulations, which are presented in a 1.0 mL BD®, pre-filled, glass syringe with staked needle, containing a fixed needle of 27G to 29G. The WhisperJECT® Autoinjector is a reusable injection device for the subcutaneous injection of certain FDA-approved drugs.

The WhisperJECT® Autoinjector device has features that have been designed by patients, for patients.

- **Textured handle** designed for a good grip and steady injection
- **Large viewing windows** on front and back to give you a visual confirmation when your injection is complete
- **Needle cap remover** safely removes needle cap so you don’t have to see the needle prior to injection
- **Multiple depth settings** of 4, 6, 8 and 10mm accommodate different body types and injection areas

Click here for the Instructions for Use provided with your WhisperJECT® Autoinjector device.

The WhisperJECT® Autoinjector is available by Rx only.
7 Possible Injection Areas

There are 7 possible injection areas. Select a different area each time you inject.

Each injection area contains multiple sites for you to choose from. **Avoid injecting in the same site more than 1 time each week.**

Glatiramer Acetate Injection is for under the skin (subcutaneous) injection only; do not inject into your veins (intravenously).

*Stomach area; Avoid 2 inches around the belly button.
**2 inches above knee and 2 inches below groin

Please see additional Important Safety Information on the back cover. Click here for Full Prescribing Information for GLATIRAMER ACETATE INJECTION 20 mg/mL or GLATIRAMER ACETATE INJECTION 40 mg/mL. Click here for the Instructions for Use provided with your WhisperJECT® Autoinjector device.
Additional online resources

Our patient website was created to help you learn more about your medication and the support services available to you:

- Medication and autoinjector information
- Patient support program and co-pay assistance eligibility details
- Self-injection information and resources
- Rotation Plan to record injection details
- Injection Preparation Mat for your supplies
- Links to community resources

Guide for Self-injection with WhisperJECT® Autoinjector Rx Only

To view instructional video online, visit GlatiramerAcetate.com
Mylan ADVOCATE® is your patient support program to help you with your Mylan’s Glatiramer Acetate Injection therapy.

MS-experienced nurses work with you one-on-one to:

- Go through the injection process step by step to help you learn proper injection techniques
- Help you adjust your routine based on lifestyle changes such as changes in weight
- Provide you with tips regarding preparation, administration, storage and disposal of your medicine
- Offer you tools for tracking self-injections
- Connect you to supportive resources and encourage you to participate in the MS community
- Assist you in connecting to a support network

For more information about your patient support program, refer to Mylan’s Glatiramer Acetate Injection Patient Brochure in your Mylan ADVOCATE® Welcome Pack.
Recording the Day and Injection Site

Visit GlatiramerAcetate.com to download your free Rotation Plan to record your injections with Mylan’s Glatiramer Acetate Injection.

- Keeping a record of your injection sites helps avoid injecting in the same sites more than once each week
- You may choose to record the location, day, and depth setting of your injection on your Rotation Plan PDF available for download from GlatiramerAcetate.com.
- See additional information in the Injection Help section of the GlatiramerAcetate.com website

Please see additional Important Safety Information on the back cover. Click here for Full Prescribing Information for GLATIRAMER ACETATE INJECTION 20 mg/mL or GLATIRAMER ACETATE INJECTION 40 mg/mL. Click here for the Instructions for Use provided with your WhisperJECT® Auto injector device.
USE

GLATIRAMER ACETATE INJECTION is a prescription medicine used for the treatment of people with relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults.

IMPORTANT SAFETY INFORMATION

Do not take GLATIRAMER ACETATE INJECTION if you are allergic to glatiramer acetate or mannitol.

Some patients report a short-term reaction right after injecting glatiramer acetate. This reaction can involve flushing (feeling of warmth and/or redness), chest tightness or pain with heart palpitations, anxiety, and trouble breathing. These symptoms generally appear within minutes of an injection. Call your doctor right away if you have any of these symptoms and do not give yourself more injections until your doctor tells you to.

Chest pain may occur either as part of the immediate post-injection reaction or on its own. This pain usually only lasts a few minutes. You may experience more than one such episode, usually beginning at least one month after starting treatment. Tell your doctor if you experience chest pain.

A permanent indentation under the skin (lipoatrophy and, rarely, death of your skin tissue also referred to as necrosis) at the injection site may occur due to local destruction of fat tissue. Be sure to follow your doctor’s instruction on how to use glatiramer acetate injection and be sure to choose a different injection site each time you use glatiramer acetate injection.

The most common side effects in studies of GLATIRAMER ACETATE INJECTION are redness, pain, swelling, itching, or a lump at the site of injection, rash, shortness of breath, and flushing. These are not all the possible side effects of GLATIRAMER ACETATE INJECTION. For a complete list, ask your doctor or pharmacist. Tell your doctor about any side effects that you have while taking GLATIRAMER ACETATE INJECTION.

Please see full Prescribing Information, for GLATIRAMER ACETATE INJECTION 20 mg/mL or GLATIRAMER ACETATE INJECTION 40 mg/mL.
