Guide for Self-Injection

With WhisperJECT® Autoinjector (Rx Only)

This self-injection guide does not take the place of talking with your doctor about your medical condition or treatment.

USE

GLATIRAMER ACETATE INJECTION is a prescription medicine used for the treatment of people with relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults.

IMPORTANT SAFETY INFORMATION

Do not take GLATIRAMER ACETATE INJECTION if you are allergic to glatiramer acetate or mannitol.

Serious side effects may happen right after or within minutes after you inject glatiramer acetate injection at any time during your course of treatment. Call your doctor right away if you have any of these immediate post-injection reaction symptoms.

Please see additional Important Safety Information on the back cover. Please see the accompanying full Prescribing Information, including Patient Information Leaflet and Instructions for Use. Please see the Instructions for Use provided with your WhisperJECT® Autoinjector device.
Features of the **WhisperJECT**

The *WhisperJECT*® Autoinjector is intended for use with FDA-approved drug products with non-viscous (aqueous) liquid formulations, which are presented in a 1.0 mL BD®, pre-filled, glass syringe with staked needle, containing a fixed needle of 27G to 29G. The *WhisperJECT*® Autoinjector is a reusable injection device for the subcutaneous injection of certain FDA-approved drugs.

The *WhisperJECT*® Autoinjector device has features that have been designed by patients, for patients.

- **Textured handle** designed for a good grip and steady injection
- **Multiple depth settings** of 4, 6, 8 and 10mm accommodate different body types and injection areas
- **Large viewing windows** on front and back to give you a visual confirmation when your injection is complete
- **Needle cap remover** safely removes needle cap so you don’t have to see the needle prior to injection

Click here for the *Instructions for Use* provided with your *WhisperJECT*® Autoinjector device.

The *WhisperJECT*® Autoinjector is available by Rx only.
7 Possible Injection Areas

There are 7 possible injection areas. Select a different area each time you inject.

Each injection area contains multiple sites for you to choose from. **Avoid injecting in the same site more than 1 time each week.**

Glatiramer Acetate Injection is for under the skin (subcutaneous) injection only; do not inject into your veins (intravenously).

*Stomach area; Avoid 2 inches around the belly button.
**2 inches above knee and 2 inches below groin

Please see additional Important Safety Information on the back cover. Click here for Full Prescribing Information for GLATIRAMER ACETATE INJECTION 20 mg/mL or GLATIRAMER ACETATE INJECTION 40 mg/mL. Click here for the Instructions for Use provided with your WhisperJECT® Autoinjector device.
Our patient website was created to help you learn more about your medication and the support services available to you:

- Medication and autoinjector information
- Patient support program and co-pay assistance eligibility details
- Self-injection information and resources
- Rotation Plan to record injection details
- Injection Preparation Mat for your supplies
- Links to community resources

Guide for Self-injection
with WhisperJECT® Autoinjector Rx Only
VIATRIS ADVOCATE™ is your patient support program to help you with your VIATRIS™ Glatiramer Acetate Injection therapy.

MS-experienced nurses work with you one-on-one to:

- Go through the injection process step by step to help you learn proper injection techniques
- Help you adjust your routine based on lifestyle changes such as changes in weight
- Provide you with tips regarding preparation, administration, storage and disposal of your medicine
- Offer you tools for tracking self-injections
- Connect you to supportive resources and encourage you to participate in the MS community
- Assist you in connecting to a support network

For more information about your patient support program, refer to Viatris' Glatiramer Acetate Injection Patient Brochure in your Viatris Advocate Welcome Pack.
Recording the Day and Injection Site

Visit GlatiramerAcetate.com to download your free Rotation Plan to record your injections with Viatris’ Glatiramer Acetate Injection.

- Keeping a record of your injection sites helps avoid injecting in the same sites more than once each week.
- You may choose to record the location, day, and depth setting of your injection on your Rotation Plan PDF available for download from GlatiramerAcetate.com.
- See additional information in the Injection Help section of the GlatiramerAcetate.com website.

Please see additional Important Safety Information on the back cover. Click here for Full Prescribing Information for GLATIRAMER ACETATE INJECTION 20 mg/mL or GLATIRAMER ACETATE INJECTION 40 mg/mL. Click here for the Instructions for Use provided with your WhisperJECT® Autoinjector device.
USE

GLATIRAMER ACETATE INJECTION is a prescription medicine used for the treatment of people with relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults.

IMPORTANT SAFETY INFORMATION

Do not take GLATIRAMER ACETATE INJECTION if you are allergic to glatiramer acetate or mannitol.

Serious side effects may happen right after or within minutes after you inject glatiramer acetate injection at any time during your course of treatment. Call your doctor right away if you have any of these immediate post-injection reaction symptoms including: redness to your cheeks or other parts of the body (flushing); chest pain; fast heart beat; anxiety; breathing problems or tightness in your throat; or swelling, rash, hives, or itching. If you have symptoms of an immediate post-injection reaction, do not give yourself more injections until a doctor tells you to.

Chest pain may occur either as part of the immediate post-injection reaction or on its own. This pain usually only lasts a few minutes or can begin around 1 month after you start using glatiramer acetate injection. Call your doctor right away if you experience chest pain.

A permanent indentation under the skin (lipatrophy and, rarely, death of your skin tissue also referred to as necrosis) at the injection site may occur due to local destruction of fat tissue. In order to reduce your chance of developing these problems, be sure to follow your doctor’s instruction on how to use glatiramer acetate injection and be sure to choose a different injection site each time you use glatiramer acetate injection.

Liver problems, including liver failure, can occur with GLATIRAMER ACETATE INJECTION. Call your healthcare provider right away if you have symptoms, such as nausea, loss of appetite, tiredness, dark colored urine and pale stools, yellowing of your skin or the white part of your eye, bleeding more easily than normal, confusion, or sleepiness.

The most common side effects in studies of GLATIRAMER ACETATE INJECTION are redness, pain, swelling, itching, or a lump at the site of injection, rash, shortness of breath, and flushing. These are not all the possible side effects of GLATIRAMER ACETATE INJECTION. For a complete list, ask your doctor or pharmacist. Tell your doctor about any side effects that you have while taking GLATIRAMER ACETATE INJECTION.

Please see full Prescribing Information, for GLATIRAMER ACETATE INJECTION 20 mg/mL or GLATIRAMER ACETATE INJECTION 40 mg/mL.
