Features of the *Whisper*JECT[®]

The *Whisper*JECT Autoinjector is intended for use with FDA-approved drug products with non-viscous (aqueous) liquid formulations, which are presented in a 1.0 mL BD[®], pre-filled, glass syringe with staked needle, containing a fixed needle of 27G to 29G. The *Whisper*JECT Autoinjector is a reusable injection device for the subcutaneous injection of certain FDA-approved drugs.

The *Whisper*JECT Autoinjector device has features that have been designed by patients, for patients.

Check with your healthcare provider when you fill or refill your medicine to make sure the autoinjector you have is meant to be used with your glatiramer acetate product. If you use the wrong autoinjector, you might not get the correct dose of your medicine.

[Click here](#) for the Instructions for Use provided with your *Whisper*JECT Autoinjector device. The *Whisper*JECT Autoinjector is available by Rx only.

7 Possible Injection Areas

There are 7 possible injection areas. Select a different area each time you inject.

Each injection area contains multiple sites for you to choose from.

Avoid injecting in the same site more than 1 time each week.

Glatiramer Acetate Injection is for under the skin (subcutaneous) injection only; do not inject into your veins (intravenously).

*Stomach area; avoid 2 inches around the belly button.

**About 2 inches above knee and 2 inches below groin.

Please see additional Important Safety Information on the last page.

Click here for Full Prescribing Information including Boxed WARNING for GLATIRAMER ACETATE INJECTION 20 mg/mL or GLATIRAMER ACETATE INJECTION 40 mg/mL.

[Click here](#) for the Instructions for Use provided with your *WhisperJECT* Autoinjector device.

Recording the Day and Injection Site

Visit GlatiramerAcetate.com to download your free *Rotation Plan* to record your injections with VIATRIS' Glatiramer Acetate Injection.

Inject Glatiramer Acetate into the fatty layer under your skin (subcutaneously).

Remember: There are multiple injection sites within each of the 7 injection areas.

Location	Day	Depth Setting
Back of Upper Right Arm (fleshy area)		
Back of Upper Left Arm (fleshy area)		
Back of Upper Right Hip (below waist)		
Back of Upper Left Hip (below waist)		
Front of Right Thigh (2 inches above knee and 2 inches below groin)		
Front of Left Thigh (2 inches above knee and 2 inches below groin)		
Abdomen (Stomach area; avoid 2 inches around the belly button)		

Keeping a record of your injection sites and a rotation plan helps avoid injections in the same sites more than once per week

You may choose to record the location, day, and depth setting of your injection on your *Rotation Plan* PDF available for download from GlatiramerAcetate.com

See additional information in the *Injection Help* section of the GlatiramerAcetate.com website

Please see additional Important Safety Information on the last page.

USE

GLATIRAMER ACETATE INJECTION is a prescription medicine that is used to treat relapsing forms of multiple sclerosis (MS), to include clinically isolated syndrome, relapsing-remitting disease, and active secondary progressive disease, in adults. It is not known if GLATIRAMER ACETATE INJECTION is safe and effective in children under 18 years of age.

IMPORTANT SAFETY INFORMATION

What is the most important information I should know about GLATIRAMER ACETATE INJECTION?

- **Serious allergic reactions (anaphylactic reactions).** Serious allergic reactions that may be life-threatening or lead to death may happen any time after you start using GLATIRAMER ACETATE INJECTION. These reactions may happen right after your first dose up to years after starting treatment with GLATIRAMER ACETATE INJECTION, even if you never had an allergic reaction before. Many reactions have happened within 1 hour of using GLATIRAMER ACETATE INJECTION. Some signs and symptoms may be the same as those of an immediate post-injection reaction. See **What are the possible side effects of GLATIRAMER ACETATE INJECTION?** Stop using GLATIRAMER ACETATE INJECTION and get emergency help right away if you have:

- **widespread rash**
- **swelling of the face, eyelids, lips, mouth, throat, or tongue**
- **sudden shortness of breath, difficulty breathing, or wheezing**
- **uncontrolled shaking (convulsions)**
- **trouble swallowing or speaking**
- **fainting, feeling dizzy or faint**

Do not take GLATIRAMER ACETATE INJECTION if you are allergic to glatiramer acetate or mannitol. Serious allergic reactions including life-threatening or anaphylactic reactions that can lead to death have happened.

Be sure to talk to your healthcare provider if you are pregnant or plan to become pregnant for them to advise if you should take glatiramer acetate during your pregnancy. Be sure to tell your healthcare provider about all of your medications.

Serious side effects may happen right after or within minutes after you inject GLATIRAMER ACETATE INJECTION at any time during your course of treatment. Call your doctor right away if you have any of these immediate post-injection reaction symptoms including redness to your cheeks or other parts of the body (flushing); chest pain; fast heartbeat; anxiety; breathing problems or tightness in your throat; or swelling, rash, hives, or itching. If you have symptoms of an immediate post-injection reaction, do not give yourself more injections until a doctor tells you to.

Chest pain may occur either as part of the immediate post-injection reaction or by itself. This type of chest pain usually lasts a few minutes or can begin around 1 month after you start using GLATIRAMER ACETATE INJECTION. Call your doctor right away if you experience chest pain.

Damage to the fatty tissue just under your skin's surface (lipoatrophy) and, rarely, death of your skin tissue (necrosis) can happen when you use glatiramer acetate injection. Damage to the fatty tissue under your skin can cause a "dent" at the injection site that may not go away. You can reduce your chance of developing these problems by:

- following your healthcare provider's instructions for how to use glatiramer acetate injection
- choosing a different injection area each time you use glatiramer acetate injection

Liver problems, including liver failure, can occur with GLATIRAMER ACETATE INJECTION. Call your healthcare provider right away if you have symptoms, such as nausea, loss of appetite, tiredness, dark colored urine and pale stools, yellowing of your skin or the white part of your eye, bleeding more easily than normal, confusion, or sleepiness.

Some glatiramer acetate products can be used with an optional compatible autoinjector. Compatible autoinjectors are supplied separately if available, but the availability of compatible autoinjectors may change with time. Check with your healthcare provider when you fill or refill your medicine to make sure the autoinjector you have is meant to be used with your glatiramer acetate product.

If you use the wrong autoinjector, you might not get the correct dose of your medicine.

The most common side effects in studies of GLATIRAMER ACETATE INJECTION are skin problems at your injection site, including redness, pain, swelling, itching, or a lump at the site of injection, rash, shortness of breath, flushing (vasodilation), and chest pain. These are not all the possible side effects of GLATIRAMER ACETATE INJECTION. For a complete list, ask your doctor or pharmacist. Tell your doctor about any side effects that you have while taking GLATIRAMER ACETATE INJECTION.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call **1-800-FDA-1088**.
